## POWER WHEELCHAIR TIPS

The doctor will need to state in the chart notes that they had a FACE to FACE evaluation with the patient. There is a 45 day window to finish the order from the initial face to face visit to delivery.

The more details a doctor gives in the chart notes documenting the patient, the better!

### ***These ALL need to be included in chart notes:***

- Measurable upper body range of motion (i.e. 3/5).
- Measurable lower body range of motion (i.e. 3/5).  
*\*Measurable numbers are critical.*
- **Why** a walker will not meet the patients mobility needs.
- **Why** a patient is unable to propel a manual wheelchair.
- State that the patient needs a motorized wheelchair **IN HOME**.
  - State why they need a chair instead of a scooter.  
(adequate turning radius)
- Will a power wheelchair help with everyday ADLs?
  - How far can a patient walk without assistance?
